What is SolarPower Europe?

- ✓ We represent **over 200 organisations** from the whole solar value chain
- ✓ We help shape the policy environment and make business happen in the solar industry

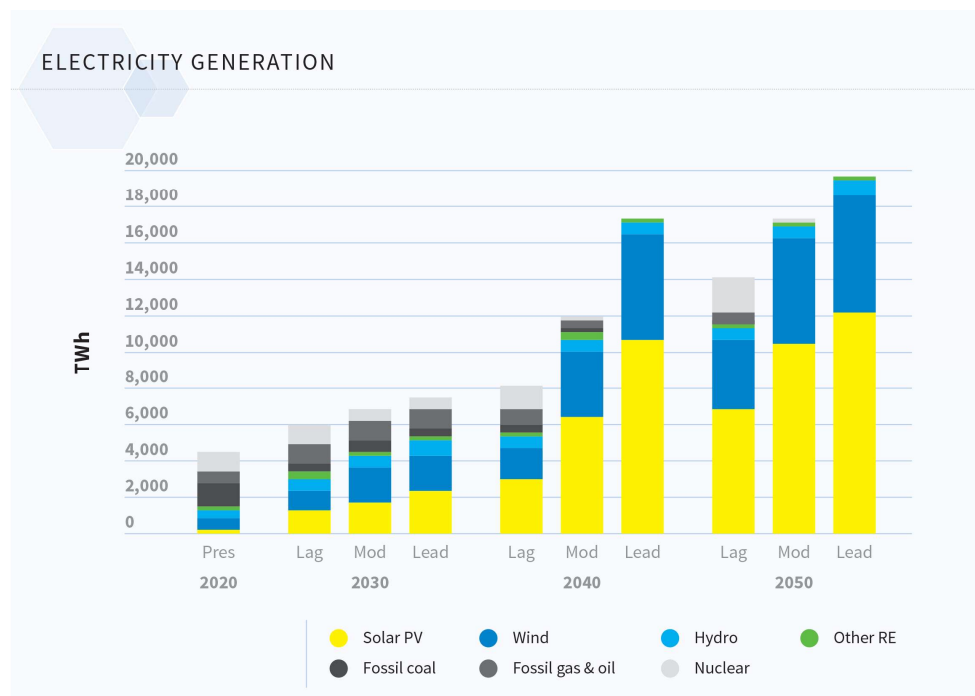

A new era of **Growth** for Solar has started in Europe

Europe solar generation capacity expected to grow strongly post-2020 once the COVID-19 short-term impacts on the solar market begin to fade out

Looking forward, solar is set to be **the dominant source of electricity generation** in Europe.

A **100% renewable energy system is primarily a solar story**. As of 2040, solar PV becomes the dominant source of electricity generation across all three scenarios in Europe. By 2050, reaches at least 48% in the Laggard scenario and up to 63% in the Leadership scenario.

A 100% renewable energy system is the most cost-efficient way to become climate neutral by 2050.

The cumulative costs of achieving a 100% renewable energy by 2050 in the Moderate scenario are **6% lower than the cost of inadequate action** in the less ambitious Laggard scenario, which reaches only 62% renewables by 2050, thus missing both the targets of European climate neutrality and the Paris Agreement.

The foundations have been laid by the acquis of the **Clean Energy Package**

- ✓ **32%** renewable energies by 2030, with an upward revision clause in 2023
- ✓ Clarity & non retroactivity for **support schemes**
- ✓ Simplified **administrative procedures** (one-stop shop for permitting, simple notification grid connection)
- ✓ Right to individual & collective **self-consumption**
- ✓ Enabling framework for **Power Purchase Agreements**
- ✓ Improved **market access** to aggregators and solar and storage
- ✓ New rules for **grid operators**

Next: as part of the European Green Deal, the EU prepares legislation that will **enshrine climate-neutrality into law**

In March 2020 the European Commission proposed **the European Climate Law**: the framework to achieve climate neutrality by 2050

Key features:

- 2030 targets increased to **50% or 55% GHG emission reductions** from current 40%
- Revised EU legislation – including a **higher RES target**
- **2030-2050 EU-wide trajectory** with 5-year assessment of progress

Next steps: The European Parliament and Council negotiations expected to begin in September

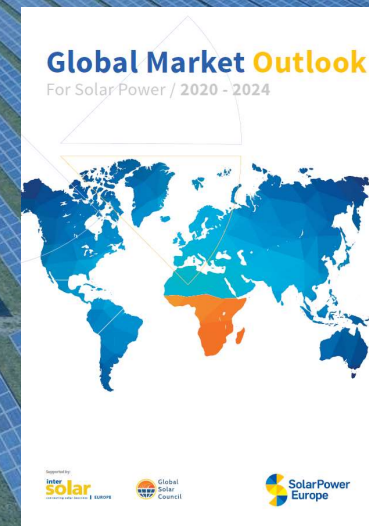

EU COVID Recovery plan to boost green and digital

**EU recovery package
“Next Generation EU”
(€750 billion, under
negotiation):** fiscal stimulus
to counter the effects of the
COVID pandemic, to be
disbursed from 2021 to end of
2023

Thank you for your attention.
